

# AI CRM Copilot: Product Definition & MVP Scope

**Venture Theme:** Enterprise AI Agents built on Microsoft Copilot & Azure OpenAI for CRM Intelligence

**Product Name:** Atlas CRM Copilot (Microsoft-aligned Copilot experience)

**Target Audience:** Enterprise customers using Microsoft Dynamics 365, Sales Leaders, Customer Success Managers, Support, RevOps, and Executive Stakeholders

---

## A. Problem Framing (Microsoft Ecosystem Context)

**Enterprise Reality:** Organizations already pay for Microsoft 365, Dynamics 365, Power Platform, and Copilot licenses, yet CRM intelligence remains fragmented.

### What problem are we solving?

Modern CRM systems (Salesforce, Dynamics, HubSpot, ServiceNow CRM) are data-rich but insight-poor.

Stakeholders struggle with: - Information Overload: Long ticket threads, call notes, emails, Slack messages, and CRM fields. - Context Switching: Leaders and execs do not have time to open CRM dashboards. - Poor Handoffs: Sales to CS, Support to Engineering, and Renewals lose critical context. - Low CRM Adoption: Reps see CRM as "data entry," not decision support.

**Key Insight:** Users do not want *more dashboards*. They want *clear answers*.

---

### Why is this valuable? (Financial & Strategic Thesis)

- **High ROI for Enterprises:** Faster deal cycles, improved renewals, and reduced churn.
  - **Operational Leverage:** AI agents reduce manual summarization, reporting, and follow-ups.
  - **Stickiness:** Once embedded into CRM workflows, switching costs are high.
  - **Platform Expansion:** Copilot becomes the intelligence layer across Sales, Support, and CS.
- 

### What's broken in existing solutions?

Solution Type	Primary Flaw	Our Advantage (Copilot Fix)
Native CRM Dashboards	Static, manual, lagging indicators	Real-time, narrative-based summaries
BI Tools (Power BI, Tableau)	Require interpretation	Plain-language insights and actions
Manual Notes & Emails	Inconsistent and error-prone	Auto-generated, context-aware summaries

Solution Type	Primary Flaw	Our Advantage (Copilot Fix)
Generic AI Chatbots	No CRM context	Deep CRM-native intelligence

## B. MVP Scope (Copilot-Native Design)

**Design Principle:** This product is built as a **Copilot extension**, not a standalone AI tool, leveraging Microsoft's security, identity, and governance stack.

### Core Product Philosophy

"Don't make users learn the CRM. Let the CRM speak for itself."

The MVP focuses on **AI Agents embedded inside existing CRM workflows**, not a standalone app.

---

### Key User Journeys (Copilot-in-the-Flow)

#### 1. Executive Summary Agent (Read-Only Intelligence)

- **Trigger:** Exec opens CRM account / deal / ticket
- **Action:** Copilot auto-generates a 5-bullet summary
- **Output:**
  - Account health
  - Open risks
  - Last interaction
  - Next best action

---

#### 2. Ticket & Case Intelligence Agent (Support & CS)

- **Trigger:** Ticket exceeds X comments or SLA risk detected
- **Action:** Agent summarizes entire thread
- **Output:**
  - Issue summary
  - Root cause hypothesis
  - Current status
  - Recommended resolution steps

---

#### 3. Sales Deal Copilot (Revenue Intelligence)

- **Trigger:** Deal stage change or pipeline review
- **Action:** Copilot analyzes notes, calls, emails
- **Output:**

- Deal confidence score
  - Stakeholder sentiment
  - Objections detected
  - Recommended follow-ups
- 

#### 4. Cross-Team Handoff Agent

- **Trigger:** Sales → CS or Support → Engineering handoff
  - **Action:** Auto-generated handoff brief
  - **Output:**
    - Customer context
    - Commitments made
    - Open risks
    - Success criteria
- 

#### MVP Features (6–8 Weeks)

Category	Must-Have (MVP – Microsoft Stack)	Nice-to-Have (Phase 2)
Interface	Dynamics 365 embedded Copilot panel	Standalone analytics view
Intelligence	Azure OpenAI GPT-based summaries	Predictive churn & revenue
Agents	Ticket, Deal, Account Agents via Copilot Studio	Renewal & Expansion Agents
Integrations	Dynamics 365, Outlook, Teams	Slack, Jira, Data Warehouse
Governance	Azure AD, RBAC, audit logs	Explainability dashboards

|-----|-----|-----| | Interface | Embedded CRM panel | Standalone analytics view | | Intelligence | Summarization & action suggestions | Predictive churn & revenue | | Agents | Ticket, Deal, Account Agents | Renewal & Expansion Agents | | Integrations | CRM + Email + Call notes | Slack, Jira, Data Warehouse | | Governance | Role-based access | Explainability dashboards |

---

#### Core Assumptions & Risks

Assumption	Risk	Mitigation
Users trust AI summaries	Hallucinations	Human-in-the-loop approvals
CRM data is usable	Poor data quality	Confidence scoring + disclaimers
AI boosts productivity	Perceived as replacement	Position as "Copilot," not automation

---

## C. Technical Breakdown (Microsoft Reference Architecture)

### System Architecture (Microsoft Reference Architecture)

1. **User Surface:** Dynamics 365 CRM + Microsoft Teams + Outlook
  2. **Copilot Layer:** Microsoft Copilot Studio (Agent Orchestration)
  3. **Intelligence Layer:** Azure OpenAI Service (GPT-4 / GPT-4o)
  4. **Data Layer:** Dataverse + Azure SQL + Azure AI Search (Vector Store)
  5. **Integration Layer:** Power Automate + Graph API
  6. **Security Layer:** Azure Active Directory, RBAC, Compliance Center
- 

### Data & Intelligence Layer (Azure-Native)

Data Type	Usage	AI Function
CRM Records	Accounts, Deals, Tickets	Context grounding
Activity Data	Emails, calls, notes	Summarization & sentiment
Historical Outcomes	Won/Lost, CSAT	Pattern detection
Metadata	SLA, stages	Risk & priority detection

---

### AI Copilot & Agent Model (Copilot Studio)

- **Agent Types:**
  - Summarization Agent
  - Risk Detection Agent
  - Recommendation Agent
- Handoff Agent

- **Key Capabilities:**

- Context preservation
- Prompt chaining
- Memory per account

---

### APIs & Tools (MVP – Microsoft Stack)

- Microsoft Dynamics 365 APIs
- Microsoft Copilot Studio
- Azure OpenAI Service
- Azure AI Search (Vector embeddings)
- Microsoft Graph API

- Power Automate
  - Audit & Logging APIs
- 

## D. Execution Plan (Enterprise Copilot Rollout)

### 0 → 1 Build Strategy (6–8 Weeks)

Phase	Weeks	Deliverables
Foundation	1–2	CRM data ingestion + basic agent
Intelligence	3–4	Summarization & action prompts
UX Embed	5–6	CRM panel + role-based views
Pilot	7–8	Launch with 2–3 teams

---

### Ship First and Why

- **Ship First:** Dynamics 365 Ticket & Deal Summarization Copilot
  - **Why:** Fastest path to executive visibility, minimal workflow change, immediate ROI inside Microsoft ecosystem
- 

### What to Defer

- Predictive AI models
  - Autonomous actions (email sending)
  - Multi-CRM federation
- 

## E. Business & Commercial Model (Enterprise Copilot)

Revenue Stream	Model	Rationale
Per-User License	\$30–\$50/user/month	Scales with adoption
AI Usage Tier	Token-based	Covers compute costs
Enterprise Add-on	Flat annual fee	Security & governance

---

## F. MVP Validation: Hypotheses & Metrics (Copilot Success Signals)

Hypothesis	Metric	Target
Copilot saves time	Time-to-context	↓ 50%
Improves decisions	Deal conversion	+10%
Reduces churn	Renewal risk flagged	>70% accuracy
High adoption	Weekly active users	>60%

---

## G. Strategic Moat (Microsoft-Aligned)

- Deep Dataverse memory & embeddings
- Copilot-native extensibility
- Enterprise-grade security & compliance
- Deep CRM-native memory
- Role-specific intelligence
- Embedded workflow adoption

### Disclaimer & Intellectual Property Notice

This solution is designed as a **Microsoft Copilot & Azure OpenAI-native architecture**, aligned with Dynamics 365 and Power Platform best practices.
